Purposes of the Study

This study was commissioned by The Brewers of Europe. The purposearefthenestostown:

- researchand analyse the trend and significance of global trade and investment patterns by the E sector sindhe1990s, when the formation of EU contributed significantly to liberalisation in the trade system
- identify and establish important contributing factors to the past and emerging trends such as the liberalisation agreement surbanisation of liberalisation agreement surbanisation of liberalisation agreement surbanisation of liberalisation and so on;
- " provide strategic insights on the future of the EU brewing sector in identifying trade strategies global competitiveness and to open new markets.

Approach "

GIS NetworkandEconometric Analysis

Geographical Scope

180 countries representing the complete world system

Comprehensive database developed to harmonize data from several international organizations (FAO, World Bank, WTO, World Economic Forum, EUROSTAT)

9 geographical groupings

Trade Data

FAOSTAT (Global trade data) from 1993 to 2012 (20 years)

EUROSTAT (Regional trade and investment data) (Supplemental Data)

Investment Data

ORBIS (includes global information on firms including ownership as of 2014 fDiMarkets (covers global greenfield investments and includes information firm, destination city, firm activity, year of investment from 2003 to 2012)

The Brewers of Europe Statistics and Interviews

Additional insights from 1150 industry experts, academics, large and small brewing firms to verify findings

Global Development and Trends

The European Commission believes that in the future, 90% of economic growth will take place outside Europe. The continued prosperity of the EU block depends on connecting to that growth and therefore it is ever more important for business and policy makers to understand the dynamics and interplay of the global changes.

Over recent decades, there have been major changes in beer consumption around the world. The important global dynamics that impact on the consumption trends and patterns of beer include income growth, demographics, urbanisation, trade, migration and international mobility, foreign investments, and regulatory and other constraints. Driven by the changing global demand, trade has grown substantially in volume and value, which in turn has significant effects on the global beer consumption trends and patterns.

European Brewers are Global Brewers

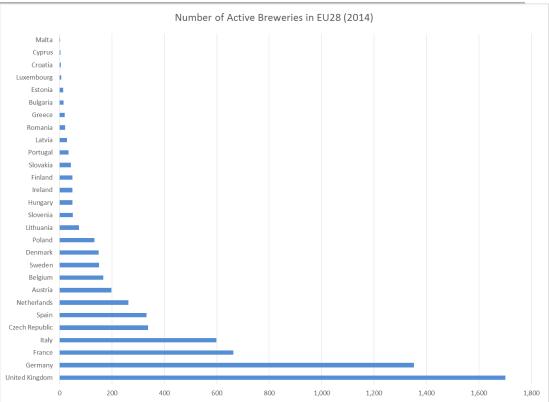

Historically, beer has always played a strong role in facilitating interaction between societies. Various studies argue that the history of beer has co-evolved with the history of agriculture, proliferation of technology, innovation and urbanisation.

Over the recent decades, the trading ties of EU brewers have extended to 123 countries in the world outside of the EU. EU28 member countries are among the top three import partners of no less than 97 countries outside of EU.

The EU is also home to headquarters of the wor llagestsbrewing companies. These multinationals are global front-runners in terms of investment in emerging markets across the African continent, Asia-Pacific and South America.

Trade and Investment as a Force for Sustainable Development

The EU brewing companies are not only important for the EU economy, but also contribute to the development of emerging economies, including developing countries. By setting up production locally in emerging markets, investments by the brewing sector contribute to the prosperity of the third countries by generating a high level of local employment, enforcing solid standards in terms of sustainable development and human rights for both itself

and suppliers.

With the still huge and growing demand in third countries both for investments and exports, there are untapped potential for sustained growth of the European brewing sector. However, further growth both within and outside of the EU will very much rely on continued trade liberalisation measures, strengthening economic relations as well as supportive legislative and governance frameworks that enable the sustainable development of the whole supply chain covering issues from employment, taxation, sustainable production and consumption, to environmental policy, food safety and food security. The focus on sustainable development is at the centre for future growth strategies.

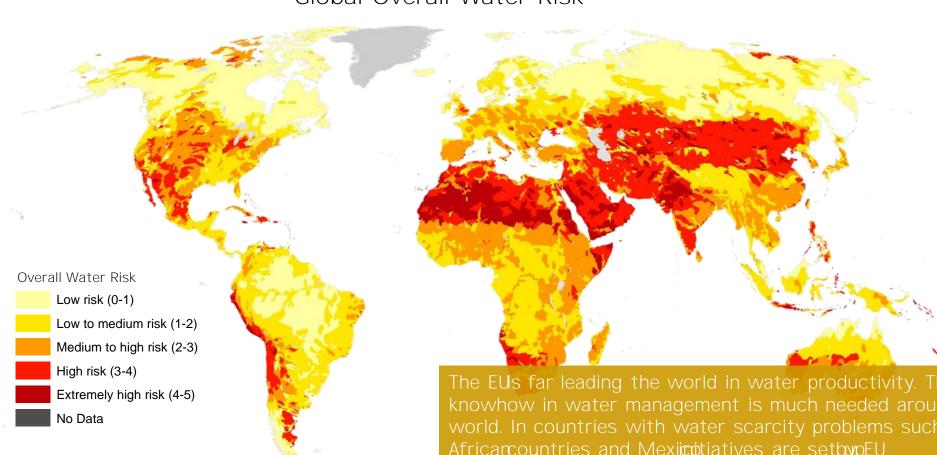

Supply Chain Security Local Sourcing and Vertical Integration

High quality barley suitable for beer malting is only grown in a few places on earth. To ensure su for the global brewing operations, both trade policy to facilitate agricultural trade and the emphasourcing are important shifts in backwin the brewery sector: contract farming schemes are being set up by the major brewers in count Ethiopia, India and enable that and enable to the sector of the

Annex II: Data and Methods

Trade Data of Beer

Time Series Greenfield Investment ties

The trade time series data covers the peribaption 2012 (20 years) e data is from the Food & Agriculture Organization (FAO) trade database. The annual trade database and covers are expressed in USD dollar values of imports and exports between country Due to the different reporting procedures, there are two trade matrixes: on **Global Ownership of Companies** contains values reported by the importing country. One The ORBIS database provides global information on fir address and postcodes, ownership status tables.

As shown by the table below, to harmonize between the discrepancies due to the different reporting procedures, an average value is calculated by taking the average between the export value reported by the exporter and the import value reported by the importer. Values only reported by one side are discarded.

Exporter	Importer	Year	Export Value Reported by Exporter	Import Value Reported by Importer	Average
Albania	Italy	2011	4	3	3.5
Albania	Macedonia	2011	7
